Authority in every setting.

Choose the right length.

Keep the story intact.

01 SHORT BIO

Dr. Khanh Nguyen is a longevity and regenerative medicine expert, founder of Austin Regenerative Therapy, and SSRP Fellow. She helps audiences look beyond symptoms to understand what drives cellular decline - and how foundational health, responsible innovation, and the right therapeutic sequence can help people function better for longer.

02 MEDIUM BIO

Dr. Khanh Nguyen is a longevity and regenerative medicine expert with more than 20 years of hospital-based critical care experience. After navigating her own autoimmune illness and caring for a son with a rare neurological condition, she shifted from asking only what the diagnosis was to asking what caused the cell to struggle in the first place. As founder of Austin Regenerative Therapy, she begins with the individual's biology and foundational health, then thoughtfully sequences therapies ranging from hormone optimization and peptides to plasma exchange and cellular medicine. Dr. Nguyen is an SSRP Fellow, educator, and sought-after voice on the science, ethics, and future of living better for longer.

03 FULL BIOGRAPHY

Dr. Khanh Nguyen is a physician, longevity and regenerative medicine expert, educator, and founder of Austin Regenerative Therapy. With more than 20 years in hospital-based critical care, she brings the rigor of acute medicine to one of health care's fastest-moving fields.

Her path into regenerative medicine is deeply personal. After overcoming an autoimmune illness and caring for a son with a rare neurological condition, Dr. Nguyen became what she calls patient number one. She began looking beyond crisis-driven care and asking what caused the cell to struggle in the first place. Today, she starts with each person's biology, history, goals, and foundational health before determining which therapies belong in the plan - and in what sequence.

Born in Vietnam, Dr. Nguyen escaped the country by boat at 13 and rebuilt her life in the United States. She earned her medical degree from Rush Medical College and completed fellowship training in critical care. She is board-certified in internal medicine, an SSRP Fellow and faculty member, and an ISSCA educator.

Science made clear. *Possibility made responsible.*

01

What Makes the Cell Fail?

AUDIENCE TAKEAWAY

The question that moved Dr. Nguyen from crisis medicine to root-cause cellular care.

02

Plasma Exchange & Healthspan

AUDIENCE TAKEAWAY

Evidence, treatment approaches, and the questions responsible patients should ask.

03

Peptides & Personalized Medicine

AUDIENCE TAKEAWAY

Biomarkers, pathways, goals, and a precise approach to peptide therapy.

04

The Right Therapy, in the Right Sequence

AUDIENCE TAKEAWAY

Why biology, foundational health, and goals must come before the product.

05

Hormones, Women & Longevity

AUDIENCE TAKEAWAY

Energy, sexual health, cognition, and hormonal change across every decade.

06

From Burnout to Reinvention

AUDIENCE TAKEAWAY

Rebuilding work, health, and identity when success is no longer sustainable.

Ten questions that create a conversation - not a commercial.

- 01 What does regenerative medicine actually mean - and where does the hype begin?

- 02 Which Hallmarks of Aging can clinicians meaningfully address today?

- 03 How do Young Plasma Exchange and therapeutic plasma exchange differ?

- 04 What should patients understand before considering peptides, exosomes, or cellular therapies?

- 05 How do you personalize a longevity plan without chasing every new intervention?

- 06 What did critical care teach you about prevention and healthspan?

- 07 How did your own health experience change the way you practice medicine?

- 08 Where do ethics and patient safety fit in a field moving this quickly?

- 09 What do most people misunderstand about aging - and what should they focus on instead?

- 10 For listeners ready to explore whether regenerative care is right for them, where can they learn more and schedule a discovery call with your team?

Ready to read as written.

Our guest is a physician, longevity and regenerative medicine expert, and founder of Austin Regenerative Therapy. After more than 20 years in hospital-based critical care, Dr. Khanh Nguyen turned her focus to proactive, cellular-level medicine. She is an SSRP Fellow and faculty member, an ISSCA educator, and a trusted voice on peptides, plasma exchange, cellular therapies, hormones, and the science of healthspan. Please welcome Dr. Khanh Nguyen.

Bring the right expertise *into the conversation.*

01

Formats

Keynotes, panels, fireside conversations, podcasts, media appearances, and virtual sessions. Typical talks adapt from 20-60 minutes.

02

Production

Wireless lavalier or headset microphone, presentation connection, confidence monitor for timed programs, and an on-site AV check.

03

Travel

Based in Austin, Texas. Final travel, accommodations, transportation, and scheduling are confirmed during booking.
